

HAMMER UNIONS

ERRE.DI hammer unions are mainly used in off-shore applications, for hard piping connection between platform and tanker.

They ensure a perfect seal at high pressures and allow a quick and easy uncoupling.

They are available in stainless steel; sizes from 1" to 12".

End connections can be threaded, butt weld and customized, depending on customer's request.

The seal can be metal to metal or with o-ring to ball coupling, for pressures from 1.000 to 10.000 PSI.
