

## SPIRAL WOUND GASKETS

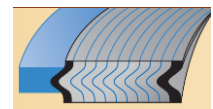

ERRE.DI offers spiral wound gaskets which suit all the customer's requirements:

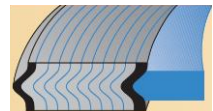

**SW:** simple spiral wound gasket used on couplings with chamber, where there is no need to limit the compression of the gasket.

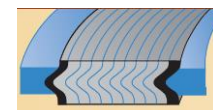

**SWE:** spiral wound gasket with external centering ring, which is used for a better positioning of the gasket in flanged couplings, where there is no need to limit the compression of the gasket.

**SWI:** spiral wound gasket with inner ring, which prevent the gasket from coming in contact with the fluid.

**SWIE:** spiral wound gasket with outer and inner rings, perfect for applications where there is a need to limit the compression of the gasket and to prevent the gasket from coming in contact with the fluid.

We can supply rings in carbon steel (A105), stainless steel (304/316), titanium, Inconel etc. Gaskets can be provided in graphite or PTFE.
